

This home owner has a L shaped Dock, and brings his boat up on the long side. The water depth is between 4- 6 feet for about 30 feet off his dock. He would like a weed free channel to get his boat in and out, and a swimming area for his kids.

To handle this area you can use 1 - 45 foot blanket and 2- 30 foot blankets overlapping. Install early in the spring and remove by July 1<sup>st</sup> and you should have a clear area all summer.

Other Options: Purchase a single LBB45 and install it in the boat area first , 4 weeks later move to middle dock area and 4 weeks later move to last dock area. This reduces your cost by 58%.

This install cost is about \$790.00 with shipping and the cost of rebar. Its giving you a 30' x 30 area to swim and a channel for the boat to launch (1100 square feet). In contrast, to do the same with a competitors system you'd need (4) – 12'x24' (1152 square feet covered) Is about \$1616.00 all in.
