

# Simple home beach installation

To handle this area you can use 1 – 30 foot long LBB's or (2) if you want to do the entire area in 1 month. Install early in the spring and remove by July 1<sup>st</sup> and you should have a clear area all summer.

We recommend installing in a minimum of 2 feet of water, but in some cases 1 foot is enough. The use of sand bags placed on the shallow ribs will help with movement.

This install cost is about \$239.00 with shipping and the cost of rebar. It's giving you a Large 10' x 30' area to swim (300 Sq. feet). Move once and it has covered your entire beach area. 600 Sq ft.
